Screens That Disappear When Not in Use

dreamscreens

The World's Finest Retractable Screens

The **Best** Solution for All Doors

The Dreamscreen is the perfect solution for virtually all screen door applications. Our exclusive patented design makes it almost invisible when not in use.

Dreamscreens

Dreamscreens are built with versatility and durability in mind. Made of the finest materials, they outlast old-fashioned screen doors. In addition to standard Dreamscreens, custom units can be built to suit, up to 9 ft. high and 8 ft. wide. Dreamscreens can be installed on French, Patio (sliding), single and even sailboat and houseboat doors!

A wide variety of screening materials are available, from 20/20 (no-see-um mesh) to translucent vinyl. Ask your dealer.

The Difference

One key feature of the Dreamscreen is the exclusive welded screen edge. Without a weld, the screen is essentially an unhemmed fabric, and would fray with use. The weld also provides double reinforced screen corners, preventing tears. Our full length magnet not only provides a complete top to bottom seal, but allows the door to retract if it is accidentally walked through. The deep top guide rail gives tremendous strength and virtually eliminates wind blowout.

The **IDEAL** Solution for French & Double Doors

Dreamscreens are the perfect way to screen French Double Doors. Two Dreamscreens share the same tracks and seal magnetically in the middle. They retract discreetly out of the way when not in use.
